I on the other hand here always believed that if we ever got funding we would start over web Client and Server subwave designed around the basic research and math this opth Dr. Burlir and I new worked in the original DOS based version know as the Cardiac Performance Lab (CPL). This would insure the most efficient use of the very small amount of time allocated to develop this product. This is a major change and it will require a complete rewrite to produce an efficient product that is email in size and easy to download over the aid. With a couple of quality programmers and at least one and possible two high quality engineers to work one as my division of the company, then I believe that we can produce this product in a mould have the job of coordinating few major effects: A patient inarrowantermace descends but lost lead alocated assembly 2 Chent totwere (User) 3. Server software (Database & estoligent separta)
